OVERALL ROLE OBJECTIVE:

This is a technical leadership role in the area of purification process development and separation sciences. The post holder is responsible for his/her own development projects and in addition provides technical leadership and guidance to a number of other scientists who are engaged in their own independent process development projects. In each case the process development project scope encompasses: development, scale-up, tech transfer and execution within manufacturing.

JOB SPECIFIC RESPONSIBILITIES:

The post holder will:

- 1 Plan, execute and deliver purification process development projects to support the manufacture of a range of custom produced biomolecules and small molecule APIs
- 2 Provide technical leadership and guidance to other scientists who are engaged in their own development of purification and separation processes
- 3 Raise the organisation's level of knowledge and capability in purification process development and separation sciences
- 4 Apply experience and knowledge to identify and implement improved ways of working
- 5 Scale up and tech transfer processes into manufacturing; provide production guidance, support and trouble shooting; at line analysis, and as and when required, participate in directly resourcing the manufacturing activities
- 6 Anticipate and identify problems, formulate potential solutions and fully implement these solutions
- 7 Record experimental procedures and results accurately and in a timely manner, prepare technical reports, process descriptions and manufacturing directions

The logo for The SRI Group features the text 'The SRI Group' in a serif font. The 'S' is stylized with a teal-to-white gradient and a white outline, and is partially overlapped by a grey, curved shape that resembles a leaf or a petal. The 'R' and 'I' are in a dark teal color, and the 'G' is in a lighter teal color.

8 Provide updates on project progress to internal project teams and external customers

QUALIFICATIONS: Bachelors Degree (or equivalent) in Chemistry or other closely related discipline

EXPERIENCE:

- Previous experience in the development and scale up of an extensive number of prep LC purification processes (mg to 100's gram scale)
- Previous experience in a range of LC based methodologies (e.g. RP, IEX, SEC, etc)
- Previous experience in the development of purification processes for large biomolecules
- Previous experience within a GMP regulated pharmaceutical environment

KEY SKILLS

- Proven ability to organise, plan, prioritise and deliver tasks within a high volume, varied workload
- Proven leadership ability
- Proven ability to work as part of team, delivering on both an individual and collective basis
- Proven ability to adapt to and deliver within various work environments (e.g. laboratory, manufacturing etc)
- Proficiency in the use of Microsoft Office packages (to include Word, Excel, PowerPoint and Outlook)
